Project proposal

For our project, we were thinking of creating some database system that will be used for a restaurant. The 12 tables we came up to fulfill our minimum table requirement are:

1. Employees
2. Employee ranks
3. Customers
4. Ingredients
5. Ingredient stocks
6. Combos
7. Orders
8. Salaries
9. Schedules
10. Employment history (length of employment)
11. Vendor
12. Drinks

We agreed on using MySQL and Java (JDBC).
